1. Age
   Young → Entropy(4, 2, 2) = $-4/8\ log(4/8 - 2/8\ log(2/8) - 2/8\ log(2/8) = 0.4515$
   Pre-presbyopic → Entropy(5, 2, 1) = $-5/8\ log(5/8) - 2/8\ log(2/8) - 1/8\ log(1/8) = 0.3909$
   Presbyopic → Entropy(6, 1, 1) = $-6/8\ log(6/8) - 1/8\ log(1//8) - 1/8\ log(1//8) = 0.3194$
   Average Entropy = $0.4515(8/24) + 0.3909(8/24) + 0.3194(8/24) = 0.3870$

   Spectacle-Prescrip
   Myope → Entropy(7, 2, 3) = $-7/12\ log(7/12) - 2/12\ log(2/12) - 3/12\ log(3/12) = 0.4168$
   Hypermetrope → Entropy(8, 3, 1) =
   $-8/12\ log(8/12) - 3/12\ log(3/12) - 1/12\ log(1/12) = 0.3578$
   Average Entropy = $0.4168(12/24) + 0.3578(12/24) = 0.3873$

   Astigmatism
   No → Entropy(7, 5, 0) = $-7/12\ log(7/12) - 5/12\ log(5/12) - 0/12\ log(0/12) = 0.2950$
   Yes → Entropy(8, 0, 4) = $-8/12\ log(8/12) - 0/12\ log(0/12) - 4/12\ log(4/12) = 0.2764$
   Average Entropy = $0.2950(12/24) + 0.2764(12/24) = 0.2857$

   Tear-prod-rate
   Normal → Entropy(3, 5, 4) = $-3/12\ log(3/12) - 5/12\ log(5/12) - 4/12\ log(4/12) = 0.4680$
   Reduced → Entropy(12, 0, 0) = $-12/12\ log(12/12) - 0/12\ log(0/12) - 0/12\ log(0/12) = 0$
   Average Entropy = $0.4680(12/24) + 0(12/24) = 0.2340$

   Root: We select Tear-prod-rate for the root as the average entropy is the lowest.

   Age
   Young → Entropy(0, 2, 2) = $-0/4\ log(0/4) - 2/4\ log(2/4) - 2/4\ log(2/4) = 0.3010$
   Pre-presbyopic → Entropy(1, 2, 1) = $-1/4\ log(1/4) - 2/4\ log(2/4) - 1/4\ log(1/4) = 0.4515$
   Presbyopic → Entropy(2, 1, 1) = $-2/4\ log(2/4) - 1/4\ log(1/4) - 1/4\ log(1/4) = 0.4515$
   Average Entropy = $0.3010(4/12) + 0.4515(4/12) + 0.4515(4/12) = 0.4013$

   Spectacle-Prescrip
   Myope → Entropy(2, 3, 1) = $-2/6\ log(2/6) - 3/6\ log(3/6) - 1/6\ log(1/6) = 0.4392$
   Hypermetrope → Entropy(1, 2, 3) = $-1/6\ log(1/6) - 2/6\ log(2/6) - 3/6\ log(3/6) = 0.4392$
   Average Entropy = $0.4392(6/12) + 0.4392(6/12) = 0.4392$

   Astigmatism
   No → Entropy(1, 5, 0) = $-1/6\ log(1/6) - 5/6\ log(5/6) - 0/6\ log(0/6) = 0.1957$
   Yes → Entropy(2, 0, 4) = $-2/6\ log(2/6) - 0/6\ log(0/6) - 4/6\ log(4/6) = 0.2764$
   Average Entropy = $0.1957(6/12) + 0.2764(6/12) = 0.2361$

Second Level: We select Astigmatism for the second level as the average entropy is the lowest.

Tree:

tear-prod-rate = reduced: none
tear-prod-rate = normal
| astigmatism = no
| | ...
| astigmatism = yes

2. Rule 1:   if ___ then "yes" → Accuracy = 9/14 = 0.6429
                 If outlook = overcast then "yes" → Accuracy = 4/4 = 1.0
    Rule 2:   if ___ then "yes" → Accuracy = 9/14 = 0.6429
                 If outlook = rainy then "yes" → Accuracy = ⅗ = 0.6
                 If outlook = rainy and windy = false then "yes" → Accuracy = 3/3 = 1.0
